NDC Layout Assistant

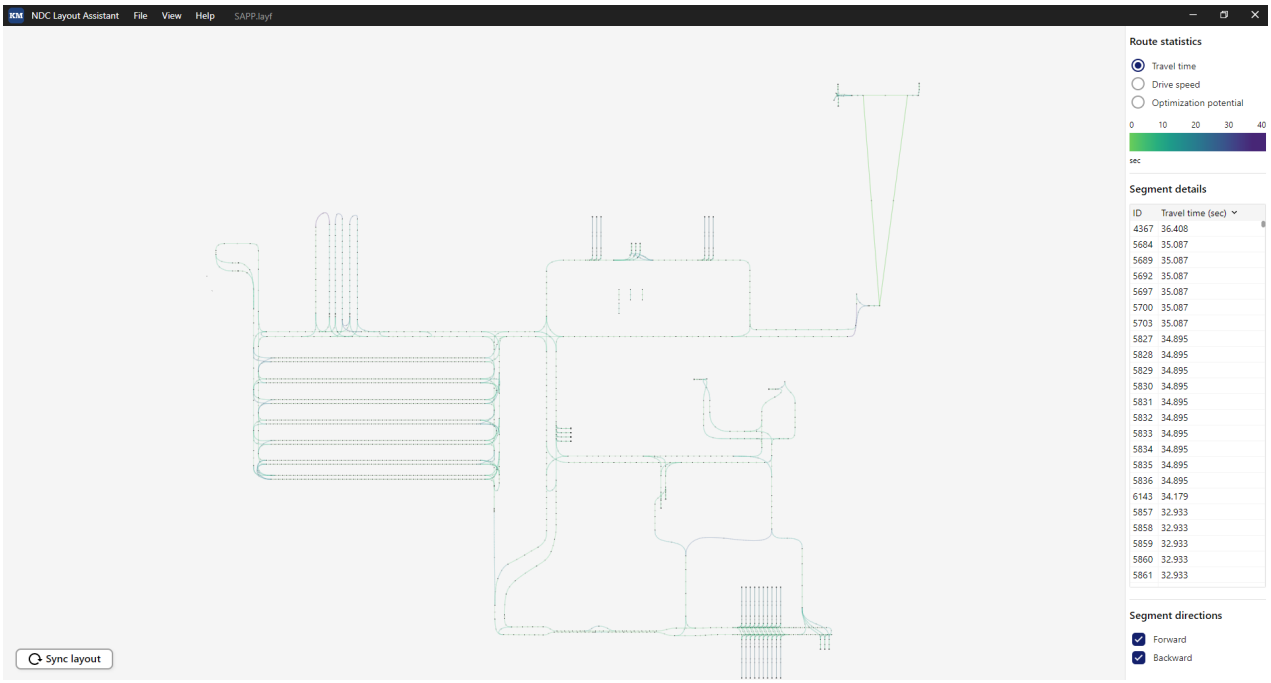

Be confident in the performance of your layout

Maximize the layout performance with instant feedback on your layout design.

NDC Layout Assistant is a user-friendly application that lets you diagnose problems with your layout design. You can easily get instant feedback on your layout design errors even before running a simulation in the NDC 8 system.

Use route statistics to visualize segment travel time, drive speed, and optimization potential. This makes it easier to understand how the layout is performing and where it needs improvements.

This information will help you improve your layout planning and optimization skills.

Features

- Easy to set up and use.
- Instant feedback on your layout design.
- Sync layout updates created in *Layout Designer* to *NDC Layout Assistant*.
- Identify problematic areas such as non-optimized layout segments.
- Use segment directions to show/hide segments in forward and backward directions in the layout.
- Use colormap for visualization of segment travel time, drive speed, and optimization potential.
