Visualizer

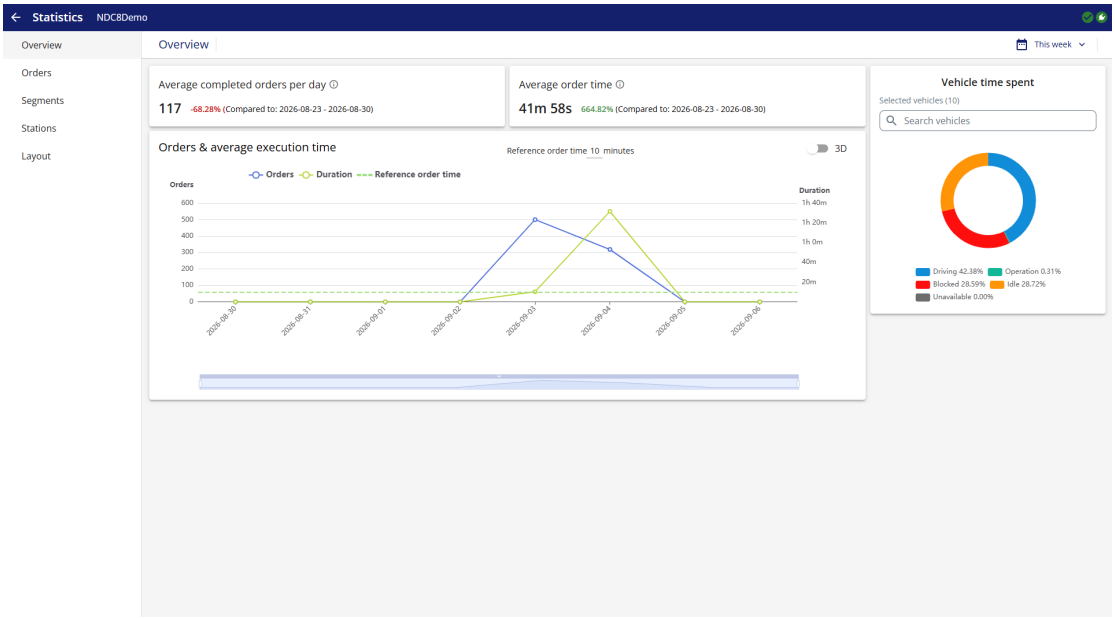

Warehouse visualization at your fingertips

Maximize system uptime with supervision and status notifications directly on your mobile device.

Visualizer is a user friendly web application that lets you supervise your NDC8 system in real time. Follow a live overview of the system and keep track of vehicle statuses - wherever you are. You can easily set up push notifications to get instant feedback when a vehicle needs support.

Use **Statistics** to analyze your system performance over time. **Overview** provides a summary of your system health, whereas **Orders**, **Stations**, and **Layout** provide detailed analysis to identify data patterns and deviations.

Visualizer Statistics

Features

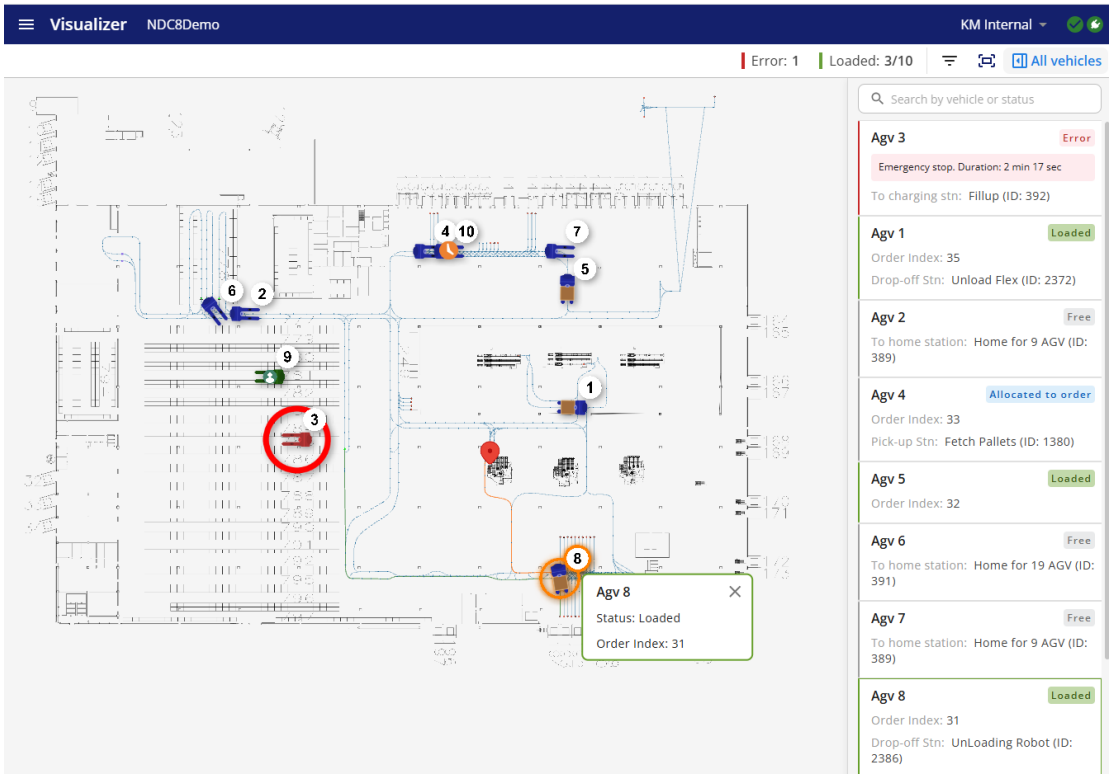

- Supervise your system in real time 24/7.
- Use your phone, tablet or computer.
- Easily manage user access to *Visualizer* with different user roles.
- Access all your sites with a single login.
- Secure, encrypted communication.
- Easy to set up and use.
- Notifications:
  - Get notified instantly if a vehicle error occurs.
  - Customize your own notification schedule to only receive notifications on specific weekdays and time of days.
- Statistics and troubleshooting:
  - Analyze the system performance over time.
  - Identify areas and vehicles with deviating data.
