1 Installing the Drive

This section describes how to install the drive.

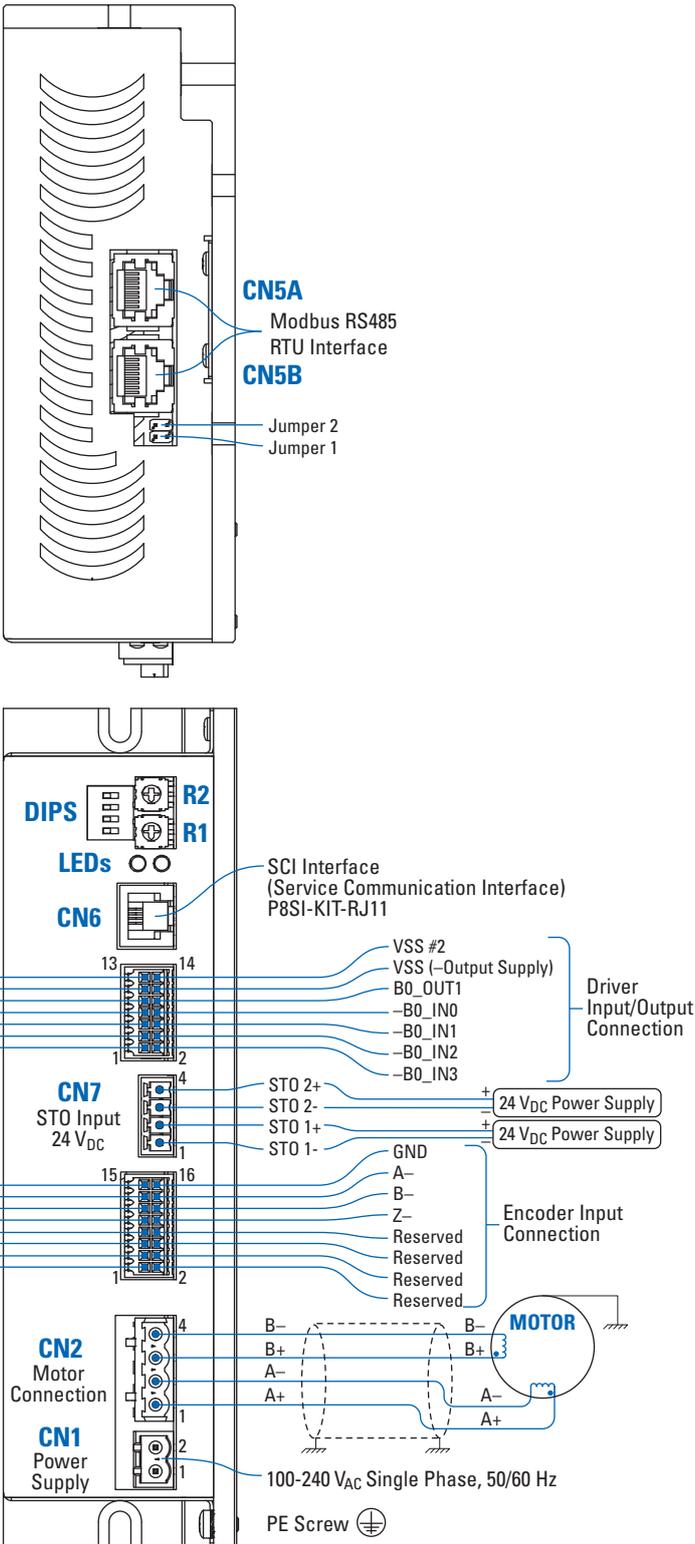

1.1 General Description

- The P80360-R4E AC stepper drive offers sinusoidal operation, which keeps the current sinusoidal regardless of the selected step angle.
- The P80360-R4E is designed to run 2-phase stepper motors, with step angles of 0.9° or 1.8°, from a power supply of 120-240 VAC, single phase 50/60 Hz.
- Feedback is offered via incremental encoders (single ended or differential).
- The drive current is programmable up to 3.0 Arms (4.2 Apeak) through the Kollmorgen Space software.
- The drive communicates via RS-485 via its Service SCI Interface or Modbus RTU Interface.
- Baud rate and node selections are done via the DIP switches 1 – 4 and roto switches R2 & R1. (See P80360-R4E Installation Manual for different addresses)

1.2 General Connections

- AC Power & PE (protective earth ground)
- Safe Torque Off (STO)
- Motor
- Feedback
- Service SCI Interface Serial connection
- Modbus RTU RS-485 connection
- I/O

1.3 Minimum Wiring for Drive Operation

NOTE: Your installation may vary from this configuration.

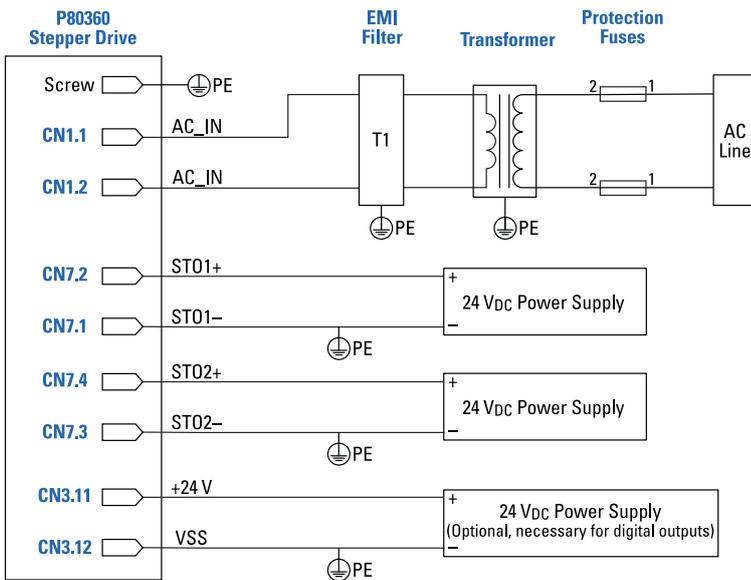

Step 1: Connect AC Power and Protective Earth (ground) CN1

120/240 VAC Line, Neutral and PE (ground)

CN1.1	AC In Line	PWR_In	AC power
CN1.2	AC In Neutral	PWR_In	AC power

Ensure PE (ground) connection for the AC Power Supply Input is connected to the PE Screw located on the drive with the symbol . Bolt the drive to a conductive metal plate, per the installation manual.

NOTE

A transformer is required for use with 240 V_{AC} in Europe. A transformer with a center tap should be used in order to maintain 120 V_{AC} (line-to-ground) maximum rated voltage. The transformer is optional, or unnecessary, for 120 V_{AC} (line-to-ground) power systems.

Step 2: Connect Logic Power and STO CN7

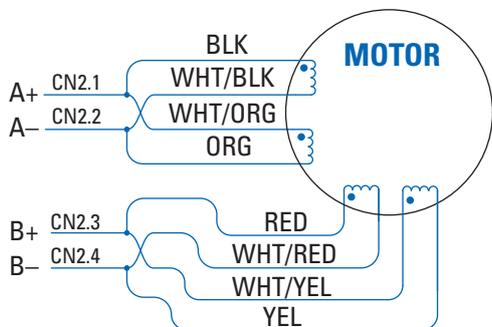

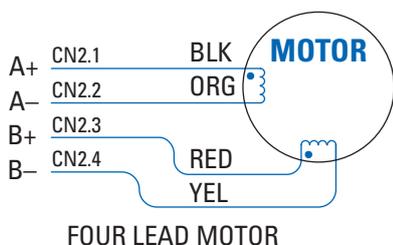

CN7.1	STO -	PWR_IN	STO1 Input negative
CN7.2	STO +	PWR_IN	STO1 Input positive
CN7.3	STO -	PWR_IN	STO2 Input negative
CN7.4	STO +	PWR_IN	STO2 Input positive

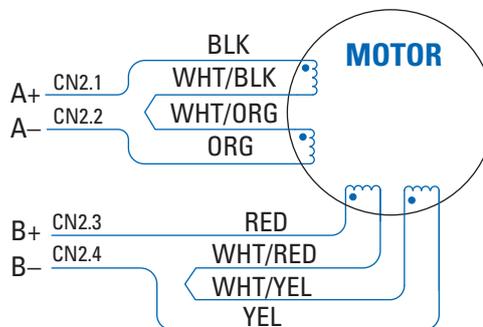

Step 3: Connect Motor Power CN2

CN2.1	A+ (A)	PWR_OUT	Motor phase A+ (A)
CN2.2	A- (A/)	PWR_OUT	Motor phase A- (A/)
CN2.3	B+ (B)	PWR_OUT	Motor phase B+ (B)
CN2.4	B- (B/)	PWR_OUT	Motor phase B- (B/)
