## Selection Guide

with AKD® Family Servo Drive Systems

**KOLLMORGEN**

# Kollmorgen: Your Partner, In Motion.

**Every solution comes from a real understanding of the challenges facing machine designers and users.**

Innovators consistently rate Kollmorgen as one of their best motion systems manufacturing partners. Whether you are looking for classic servo motors, direct-drive servo motors, stepper motors, drives & amplifiers, gearing, actuation, or multi-axis motion controllers, Kollmorgen is one of the few companies in the world that actually designs and manufactures all of these products.

Our customers are leaders in many industries such as Aerospace & Defense, Printing, Packaging & Converting, Food & Beverage Processing, Medical Imaging, In Vitro Diagnostics & Laboratory Automation, Pharmaceutical Manufacturing, Material Forming and Cutting, Oil & Gas, and Robotics. Kollmorgen is also a leader in Warehouse Automation, including complete AGV systems, software, awareness and autonomy.

Our Automation Solutions can be found on Mars and in space, ships and submarines, O&G drilling and metrology, surgical robots and laser eye surgery, even inside artificial hearts. These are just a few applications that demand high-performance and high-quality while satisfying their specific needs.

**Because motion matters, it's our focus:** Motion can distinctly differentiate a specific machine and deliver a marketplace advantage by increasing its performance and dramatically improving Overall Equipment Effectiveness (OEE).

High-performance motion can make your customer's machine more reliable and energy-efficient, enhance accuracy and improve operator safety. Motion also represents endless possibilities for innovation.

We've always understood this potential, and thus have kept motion at our core and in our Vision, Mission & Values, relentlessly developing products that offer precise control of torque, velocity and position accuracy in machines that rely on complex motion.

**Removing the Barriers of Design, Sourcing, and Time**

At Kollmorgen, we know that OEM engineers can achieve a lot more when obstacles aren't in the way. So, we clear obstacles in three important ways:

**Integrating Standard and Custom Products**

The optimal solution is often not clear-cut. Our application expertise allows us to modify standard products or develop totally custom solutions across our whole product portfolio so that designs can take flight.

**Providing Motion Solutions, Not Just Components**

As companies reduce their supplier base and focus their engineering manpower on the product design, they need a total system supplier with a wide range of integrated solutions. Kollmorgen offers complete solutions as well as motion subsystems that combine programming software, engineering services and best-in-class motion components.

**Global Footprint**

With direct sales, engineering support, manufacturing facilities, and distributors spanning the Americas, Europe, the Middle East, and Asia, we're close to OEMs worldwide. Our proximity helps speed delivery and lend support where and when they're needed.

**Financial and Operational Stability**

Kollmorgen is part of Altra Industrial Motion. A key driver in the growth of all Altra divisions is the Altra Business System, which relies on the principle of "kaizen" – or continuous improvement. Using world-class tools, cross-disciplinary teams of exceptional people evaluate processes and develop plans that result in superior performance.

## AKM Motors Offer Extremely High Torque Density and High Acceleration

The AKM high-performance motor series offers a wide range of mounting, connectivity, feedback and other options. These motors offer superb flexibility to meet application needs with:

- 8 frame sizes (40 to 260 mm)
- 28 frame-stack length combinations
- More than 120 standard windings

### Features

#### Torque

0.16 to 180 Nm continuous stall torque (1.4 to 1590 lb-in) in 28 frame/stack combinations. Specific torques are often available from multiple frame sizes to optimize mounting and inertia matching capabilities.

#### Speed

Speeds up to 8000 rpm meet high speed application requirements. Windings tailored to lower speeds are also available.

#### Voltage

AKM motors can be applied to all standard global voltages. Windings are specifically tailored to work with drives powered by 75 Vdc, 120, 240, 400 or 480 Vac.

#### Mounting

Multiple mounting standards are available to meet common European, North American, and Japanese standards.

#### Feedback

AKM motors include resolver, encoder (commutating), Sine-Absolute encoder or SFD (Smart Feedback Device) feedback options to meet specific application requirements.

#### Smoothness

Smooth performance results from low-cog, low-harmonic distortion magnetic designs.

#### Connectivity

Rotatable IP65 connectors, straight IP67 connectors or low cost IP20 Molex plugs are both available to provide flexibility. Single connectors/plugs (combined power and feedback) are also available to minimize motor and cable cost (SFD and DSL only).

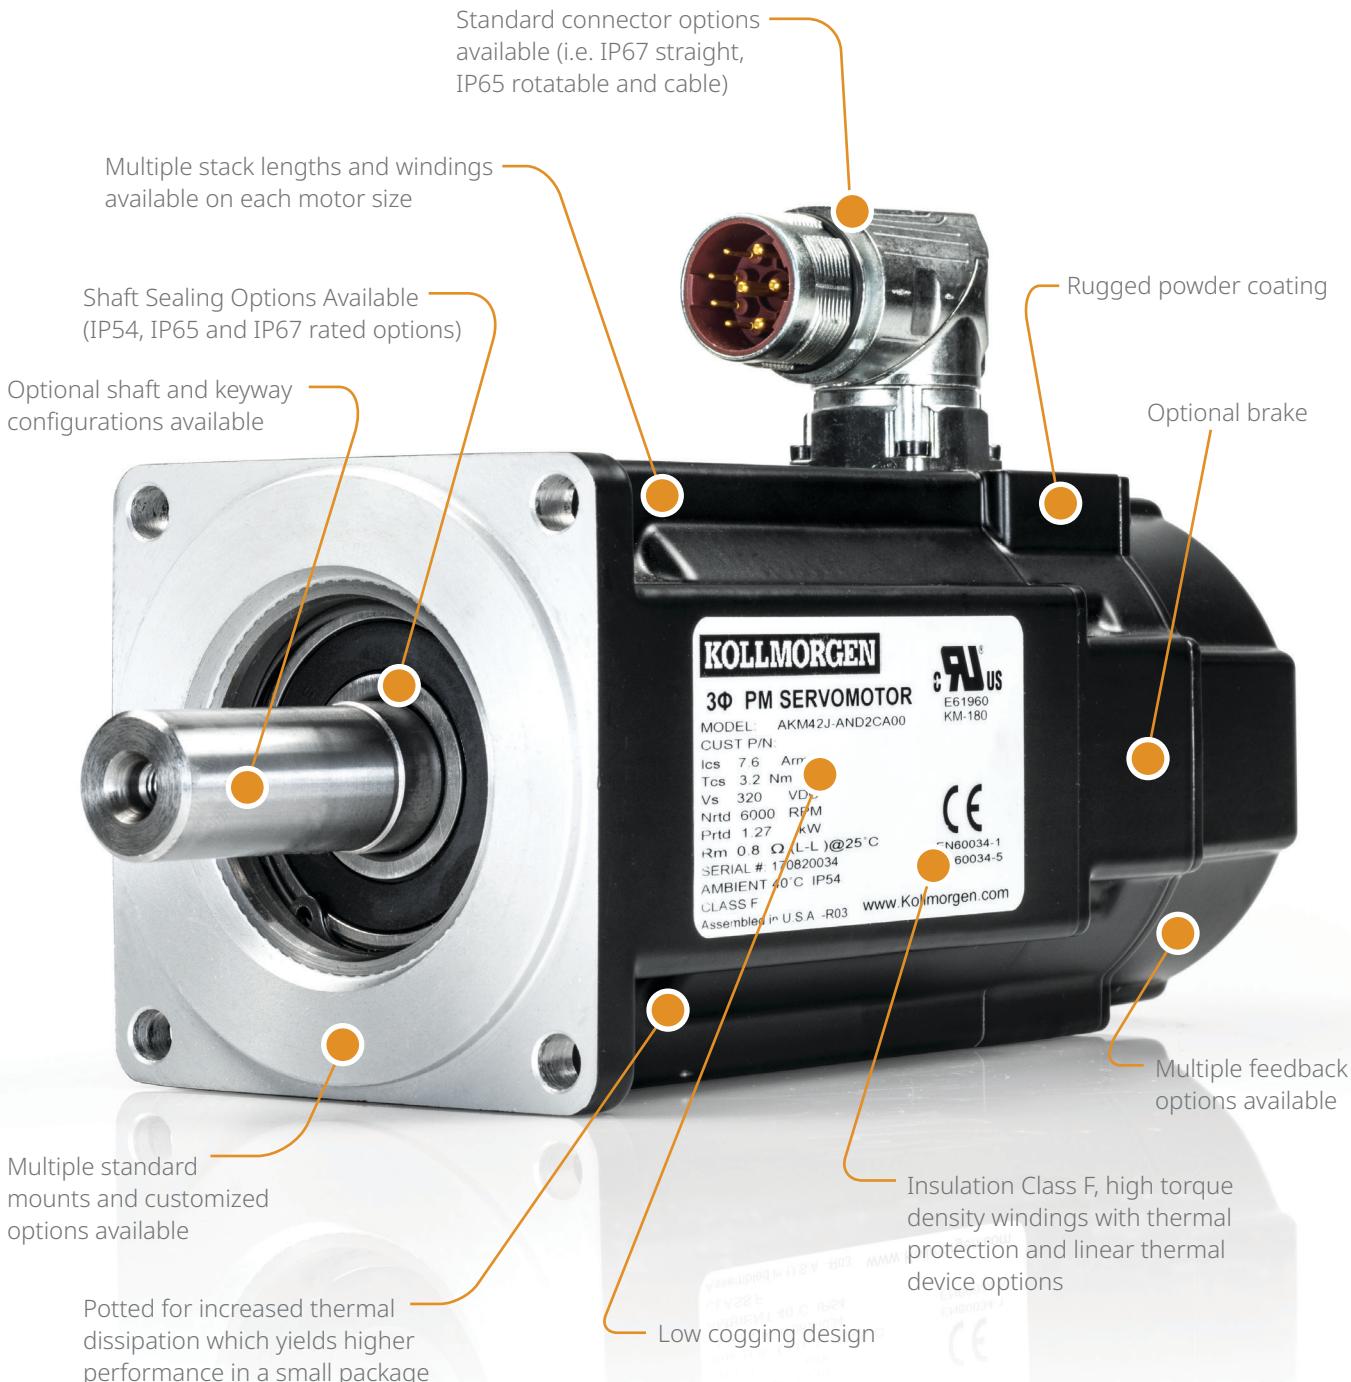

#### Thermal

Windings are rated conservatively at 100°C rise over a 40°C ambient while using 155°C (class F) insulation materials. Motors meet applicable UL, CSA, and CE requirements and include thermistors.

#### Additional Options:

- » Holding Brakes
- » Shaft sealing options available
- » Feedback devices
- » Shaft and mounting variations

Notes:

- ① Motor winding temperature rise,  $\Delta T=100^\circ\text{C}$ , at  $40^\circ\text{C}$  ambient.
- ② All data referenced to sinusoidal commutation.
- ③ Add parking brake if applicable for total inertia.
- ④ Motor with standard heat sink.
- ⑤ May be limited at some values of Vbus.
- ⑥ Measured at  $25^\circ\text{C}$ .
- ⑦ For non-resolver feedback options: no continuous torque reduction.
- ⑧ For motors with optional shaft seal, reduce torque shown by 0.021 Nm (0.19 lb-in), and increase  $T_f$  by the same amount.
- ⑨ Brake option increases weight by 0.19 kg (0.42 lb).
- ⑩ Motors can be operated up to 240 Vac. For performances curves at voltages, listed or unlisted, please use our online [Performance Curve Generator Tool](#).
- ⑪ Brake option will operate in this range in a non-condensing environment. See page 55 for more information.
- ⑫ "AA" or "AB" BiSS feedback lower limit is  $-15^\circ\text{C}$ ; all other feedbacks meet or exceed this range.
- ⑬ Operation outside of this range may be possible. Please contact Kollmorgen Customer Support with your application requirements.

Notes:

- ① Motor winding temperature rise,  $\Delta T=100^{\circ}\text{C}$ , at  $40^{\circ}\text{C}$  ambient.
- ② All data referenced to sinusoidal commutation.
- ③ Add parking brake if applicable for total inertia.
- ④ Motor with standard heat sink.
- ⑤ May be limited at some values of Vbus.
- ⑥ Measured at  $25^{\circ}\text{C}$ .
- ⑦ Brake option reduces continuous torque ratings by:  
 $\text{AKM51} = 0.15 \text{ Nm}$     $\text{AKM52} = 0.26 \text{ Nm}$     $\text{AKM53} = 0.35 \text{ Nm}$     $\text{AKM54} = 0.43 \text{ Nm}$
- ⑧ Non-Resolver feedback options reduce continuous torque ratings by:  
 $\text{AKM51} = 0.15 \text{ Nm}$     $\text{AKM52} = 0.34 \text{ Nm}$     $\text{AKM53} = 0.58 \text{ Nm}$     $\text{AKM54} = 0.86 \text{ Nm}$
- ⑨ Motors with non-resolver feedback and brake option, reduce continuous torque by:  
 $\text{AKM51} = 0.39 \text{ Nm}$     $\text{AKM52} = 0.76 \text{ Nm}$     $\text{AKM53} = 1.13 \text{ Nm}$     $\text{AKM54} = 1.55 \text{ Nm}$
- ⑩ For motors with optional shaft seal, reduce torque shown by 0.13 Nm (1.2 lb-in), and increase T<sub>f</sub> by the same amount.
- ⑪ Brake option increases weight by 1.2 kg (2.64 lb).
- ⑫ Motors can be operated up to 480 Vac. For performances curves at voltages, listed or unlisted, please use our online [Performance Curve Generator Tool](#).
- ⑬ Brake option will operate in this range in a non-condensing environment. See page 55 for more information.
- ⑭ "AA" or "AB" BiSS feedback lower limit is  $-15^{\circ}\text{C}$ ; all other feedbacks meet or exceed this range.
- ⑮ Operation outside of this range may be possible. Please contact Kollmorgen Customer Support with your application requirements.

Additional Notes:

See system data beginning on page 14 for typical torque/speed performance.

Additional windings may exist. Please contact Kollmorgen Customer Support for further information or to request custom winding options for your application requirements.

# Brake Option

## Failsafe, Holding Brake

The holding brake is designed to provide static holding torque to the motor shaft with the brake coil de-energized. The brake must first be released (coil energized) prior to commanding motor rotation as determined by its drop-out time. The brake is intended for holding or “parking” of a stationary motor. It is not intended for dynamic braking. There should be absolutely no motion of the rotor when power is removed from the brake coil.

Note 1: Contamination of the motor internal compartment by oil or other foreign materials will result in failure of the brake. Check the suitability of motor sealing for the working environment.

Note 2: Operating Voltage: 24 Vdc ± 10%.

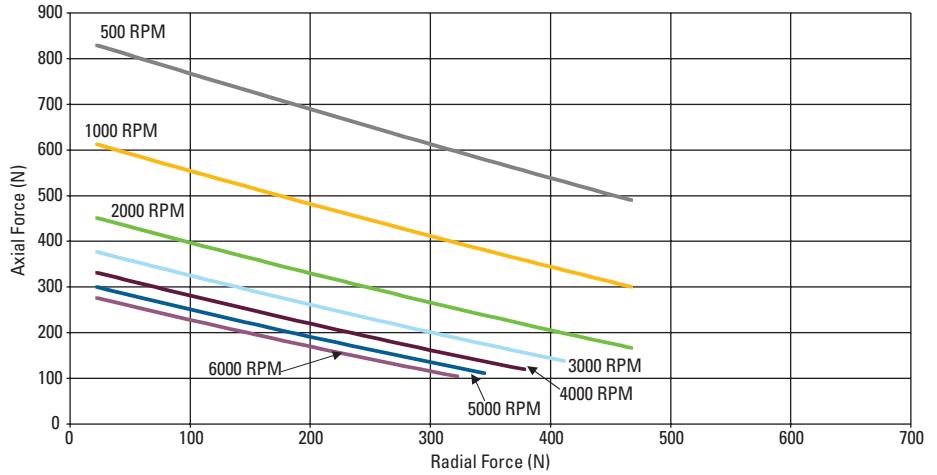

Note 3: Maximum backlash is calculated using worst-case tolerancing, and typical backlash is calculated using statistical tolerancing.

Note 4: Brake Operating Temperature Range: -20C to 120C. Sub-zero temperatures present a freezing risk for condensation which could prevent correct brake operation.

## Shaft Loading

Motor	Max. Radial Force (N)	Max. Axial Force (N)
AKM1	48	200
AKM2	150	600
AKM3	340	600
AKM4	500	1400
AKM5	830	1740
AKM6	1940	2200
AKM7	2300	3000
AKM8	2752	4750

The maximum radial load ratings reflect the following assumptions:

1. Motors are operated with peak torque of the longest member of the frame size.
2. Fully reversed load applied to the end of the smallest diameter standard mounting shaft extension. Excluding AKM4X-EK which is rated at 240 N max. radial force.
3. Infinite life with 99% reliability.
4. Safety factor = 2.

## Teflon Shaft Seals

There is a normal break-in period for our Teflon® shaft seals. Best conditions during the break-in period would be at the operational temperature and speed that would be typical for the application.

During the break-in period, some "shedding" of Teflon material is normal. The debris is not a sign of seal deterioration or failure. The material "shed" should be reduced with usage.

Typically, a few hours at operational speed is enough to break-in the shaft seal.

# Thermal Sensor Protective Devices

The standard version of each motor is fitted with an electrically isolated PTC Avalanche-Type thermal sensor or PT1000 RTD Linear thermal sensor, depending on connector (see Connector Option table on p. 11). The thermal sensors do not provide any protection against short, heavy overloading.

The motor can be delivered with a PT1000 or KTY84/130 equivalent sensor optionally for certain connectors (see Thermal Sensor options 1 and 2). Please consult Kollmorgen Customer Support for optional thermal device requests based on motor configuration.

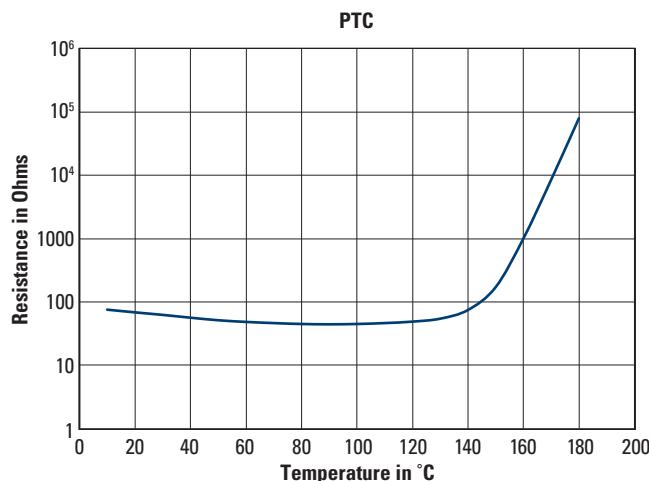

With digital feedback systems SFD (C), SFD3 (CA) and Hiperface DSL (GE/GF), the temperature sensor status is transmitted digitally and evaluated in the drive.

Provided that our configured feedback cables are used, the sensor is integrated into the monitoring system of the digital servo amplifiers.

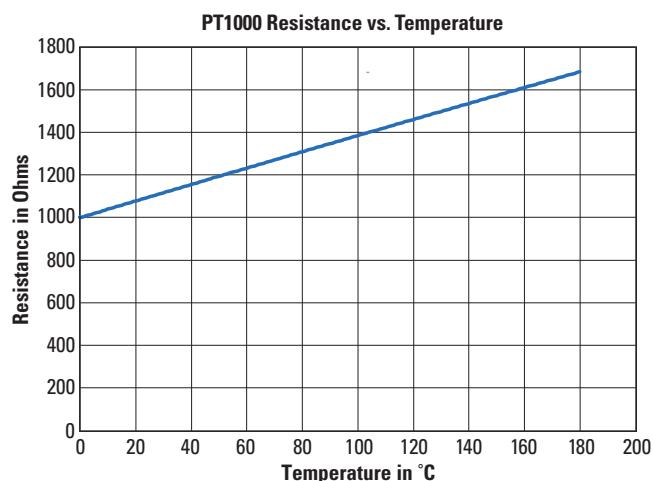

## Thermal Device Options: Resistance vs. Temperature Graphs

Kollmorgen AKD drives can directly interpret information from the motor thermal sensors to properly reflect the motor winding temperature. For other drives please refer to the graph Delta Between Motor Winding and Thermal Device on the following page.

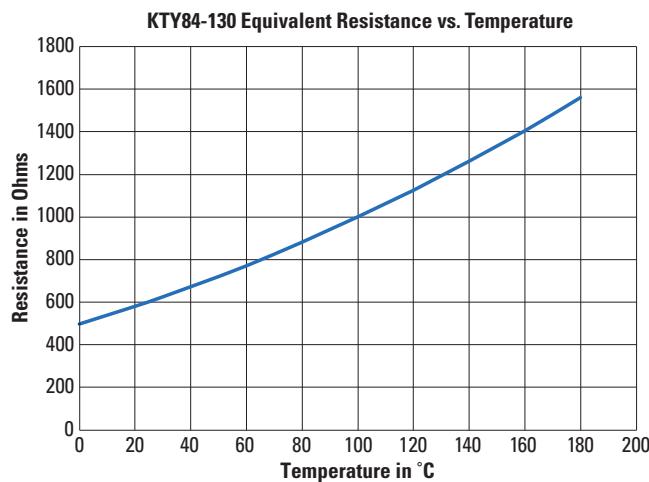

### Standard

### Option 1

### Option 2

Note 1: PTC thermistor (155°C ± 5°C switching temperature) installed.

Resistance at 25°C: ≤550 ohms.

Switching Resistance: ≥1330 ohms within ±5°C of switch temperature.

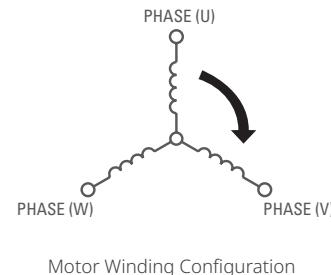

Note 2: Optional KTY84-130 Nominal Resistance at 25°C, 603 ohms.

### General notes:

- When motor is rotated CW (viewed from drive shaft end), these waveforms result:
  - Voltage U , leads V , leads W.
  - Voltage U-W leads Voltage V-W by 60° electrical.
- When optional shaft seal is included on front shaft extension, note that static friction stated in catalog or on winding data sheet is measured without shaft seal installed.
- Standard outline drawings showing mounting dimensions and standard winding information are available on our website or by calling the Kollmorgen Customer Support at 1-540-633-3545, or through email at support@kollmorgen.com.

# AKD® 2G Servo Drive

The newest member of the AKD family is our most powerful yet.

Along with increased power, the AKD2G is simplified and includes integrated SafeMotion™ that increases Ease-of-Use.

The new AKD2G servo drive introduces the Kollmorgen Servo on a Chip™: A powerful compute engine that can control two axes simultaneously and up to 28 I/O. While we were at it, we streamlined the design by optimizing the AKD2G for single-cable motors.

## The Benefits of AKD®2G Servo Drives

### Flexible

## AKD2G Means Unparalleled Connectivity

### Base Model

The base model of Kollmorgen's AKD2G includes all of the performance described previously, and is optimized to interface to a single-connector motor with Kollmorgen's Smart Feedback or HIPERFACE<sup>®</sup> DSL. It also offers 16 I/O, 160x128-pixel graphical display, removable SD card, and your choice of motionbusses.

### Extended I/O Variant

The extended I/O variant offers everything on the base model, plus I/O expansion. It adds additional 12 I/O for a total of 28 I/O. The option fit in the same package as the base model.

### Two-cable feedback option

Needing support for non-single-cable feedback like EnDat, BiSS or incremental encoders? The two-cable feedback option adds a 15-pin SUB-D connector for dual cable feedback or dual-loop operation.

### SafeMotion<sup>™</sup> Monitor (SMM<sup>™</sup>)

The Extended I/O model is offered with the optional SMM. The SMM converts some of the I/O into "Safe" I/O, and allows the drive to interface safely to an FSoE master. Again, these options fit in the same package as the base model.
