Introduction

Kollmorgen - Serving the Aerospace and Defense Industry

By combining industry-leading brands, Danaher Corporation established a customer focused motion control manufacturer known as Danaher Motion. Dedicated to making it easy for a customer to benefit from a broad range of technology and experience Danaher Motion serves the aerospace and defense industry through the Kollmorgen brand.

The Kollmorgen team provides aerospace and defense customers with high standards of quality, innovation and technology to improve a machine's performance and reliability. In addition, Danaher Motion's global manufacturing footprint, rapid customization and prototyping capabilities drive quick lead times which empowers Kollmorgen's customers to commission their machines faster.

Kollmorgen also offers the aerospace and defense industry unparalleled depth and breadth of motion control product solutions through a worldwide service and support infrastructure made up of field service engineers and support teams that are available when and where customers need them.

Kollmorgen and the Danaher Business System

Established with the intent to continually improve operations and bring increasing value to customers, the Danaher Business System (DBS) helps improve the efficiency of manufacturing and product development processes. DBS is a team approach based on the principles of Kaizen that continuously and aggressively eliminates waste in every aspect of business operations. DBS focuses the entire organization on achieving breakthrough results that create competitive advantages in quality, delivery and performance – advantages that are passed on to the customer. Through these advantages Kollmorgen is able serve the aerospace and defense customer with faster times to market as well as unsurpassed product selection, service, reliability and productivity.

Introduction to the EKM Motor Series

Enhanced, High-Performance, Brushless AC Servo motors

EKM Series Motors are Mil-Spec 810E rated and IP67 sealed for duty in harsh environmental conditions.

- Industry leading power and torque density
- Meets IP67 sealing requirements and is 100% leak-tested housing for further moisture blocking
- Ideal for most military specifications
- C.O.T.S (commercial off the shelf) solution
- Standard product offering with customization available

Torque

Offers 0.43 to 53 N·m continuous stall torque (3.8 to 467 lb in).

Speed

Speeds up to 8000 rpm meet high speed application requirements while the windings can be specifically tailored to lower speeds as well.

Voltage

EKM Series Motors feature 480 VAC High Voltage Insulation.

Feedback

Rugged Resolver feedback can survive the most extreme environments.

Friction Torque

Low-cog, low harmonic distortion magnetic designs.

Connectivity

High performance nickel-plated MIL-C-38999 connectors with total environmental sealing, quick mating, triple lead threaded, self-locking coupling, as well as EMI and RFI shielding. In addition, both front-facing and rear-facing options are available.

Thermal

EKM Series Motors are rated for operation over a temperature range of -51°C to 54°C and feature 155°C (class F) insulation materials which include a thermistor.

Corrosion

Stainless steel shaft and fasteners prevent external corrosion while a chemical agent resistant paint allows resistance to harsh outdoor environments and chemicals.

Sealing

IP67 rated for ingress prevention and brief submergence as well as 100-psi wash down. In addition, a viton shaft seal comes standard.

Shock

Tested per MIL-STD-810E, Method 516.4, Procedure 1, 75g half sine wave pulses for 11 ms, 3 times in each axis (total of 18 shocks).

Vibration

Tested per MIL-STD-810E, Method 514.4, Procedure 1, Operational 0.01g²/Hz 5-30Hz, 0.02g²/Hz 75-500Hz, 0.006g²/Hz 900-2000 Hz.

Mounting

International Standard Mount available.

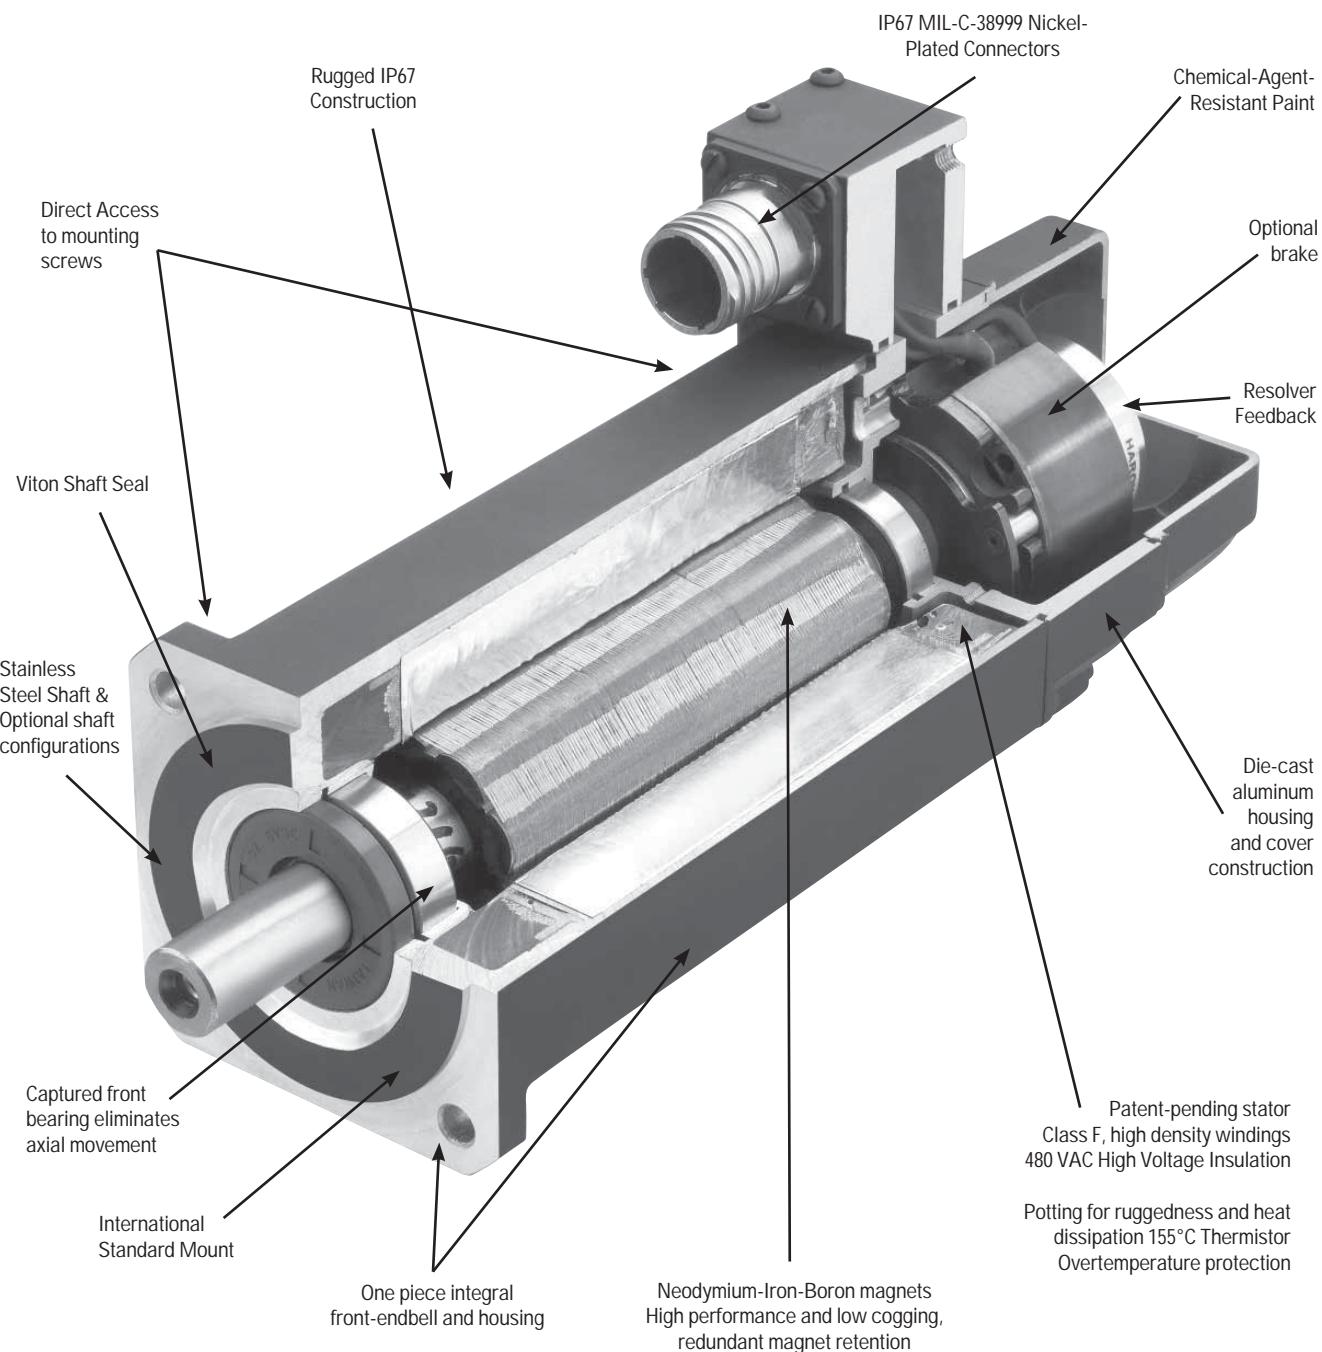

Options

Additional motion control solutions are available with these options:

- Fail-safe brakes
- Shaft variations
- Custom windings

Advanced Motor Design Features

The enhanced EKM motor series is Mil-Spec 810E rated, IP67 sealed, and comes standard with a stainless steel shaft and chemical-agent-resistant paint.

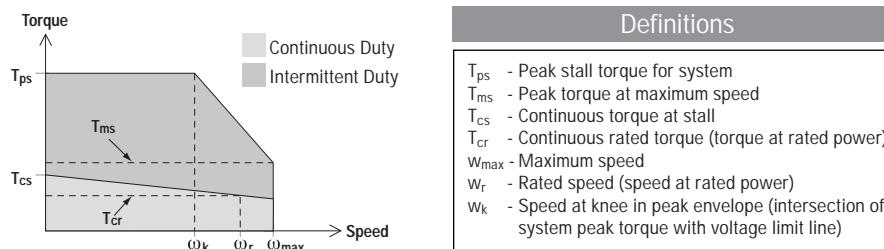

Note: The EKM Series is not CE compliant.

System Overview

How To Build A Servo Drive & Motor System

System torque/speed information on the following pages is designed to help you select the optimum brushless servomotor/controller combination. The nominal values in this data illustrate performance for the recommended motor/controller systems.

Drive & Motor Performance Curves

The performance characteristics of a brushless servo system (motor/controller combination) are described by a torque/speed operating envelope. As shown above, the shaded areas of the curve indicate the continuous duty and intermittent duty zones of the system.

Continuous Duty Zone

The continuous duty zone is bordered by the maximum continuous torque line up to the intersection with the intermittent duty line. The continuous torque line is set by either the motor's maximum rated temperature, or the controller's rated continuous current output, whichever is less. The system voltage line is set by the voltage rating of the controller, the line voltage supplied, and the motor winding. The system can operate on a continuous basis anywhere within this area, assuming the ambient temperature is 40°C or less. Refer to the Test Conditions on the pages that follow.

Intermittent Duty Zone

The intermittent duty zone is bordered by the peak torque line and the system voltage line. The peak torque line is set by either the controller's peak current rating, which the controller can produce for a limited time, or the maximum rated peak current for the motor, whichever is less. Refer to the Rating Data on the pages that follow. NOTE: higher torque levels may be achievable at higher power levels.

Consult Danaher Motion Customer Support for more details. The system voltage line is set by the voltage rating of the controller, the line voltage applied and the motor winding. Operation in the intermittent zone must be limited to a duty cycle that will produce an RMS system torque falling within the continuous duty area. The RMS torque value is a function of the magnitude of the intermittent torque and the percentage of the time spent at that torque.

Zero - Peak, or RMS?

Current brushless drive technology uses a sinusoidal output. Danaher Motion rates its systems using RMS values to accurately reflect system performance operating with a sinusoidal waveform.

Notes:

① Motor Performance based on $\Delta T = 100^\circ\text{C}$ in a 40°C ambient (winding temp = 140°C) with listed Heat Sink.② Motor Parameters BEMF, Resistance, and Inductance measured at 25°C .

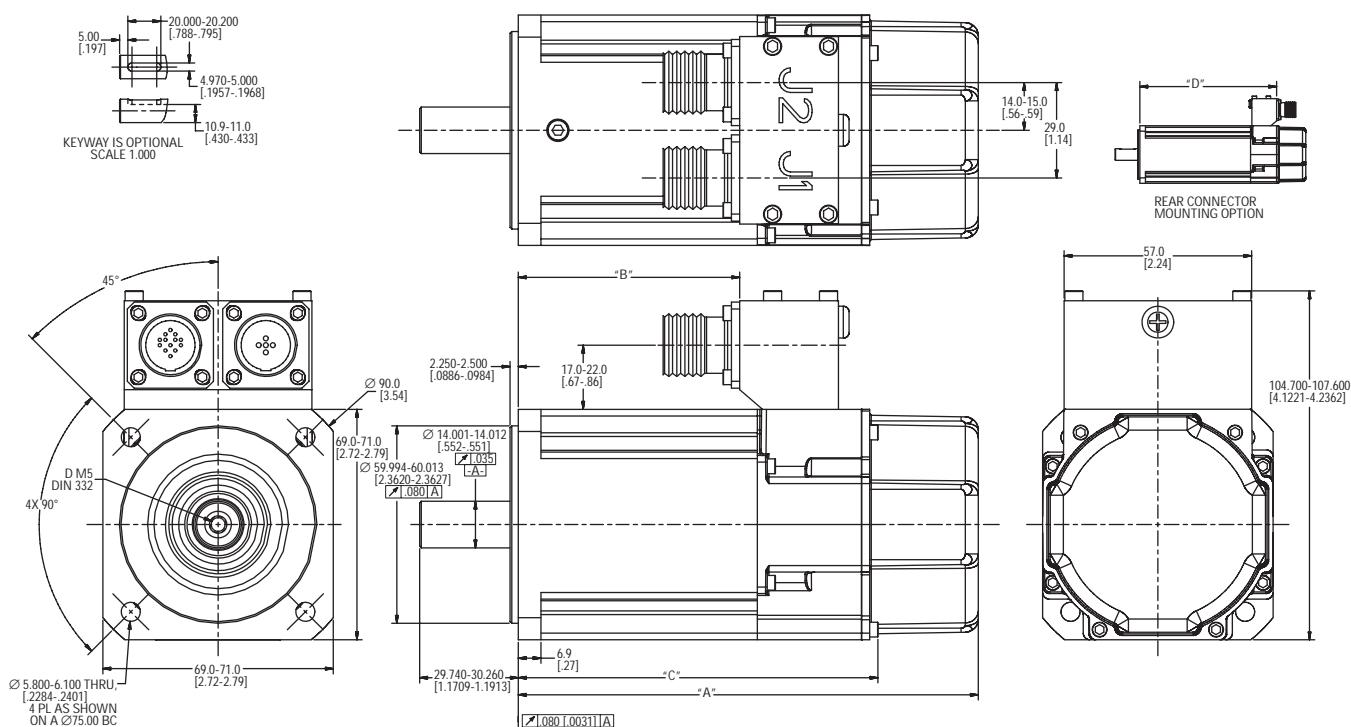

③ All data referenced to sinusoidal commutation.

④ Speed may be limited by Vbus.

⑤ Brake option reduces continuous torque by: EKM21 = 0.0 N·m EKM22 = 0.01 N·m EKM23 = 0.02 N·m EKM24 = 0.05 N·m

⑥ Motor weight does not include brake option.

Notes:

① Motor Performance based on ΔT = 100°C in a 40°C ambient (winding temp = 140°C) with listed Heat Sink.

② Motor Parameters BEMF, Resistance, and Inductance measured at 25°C.

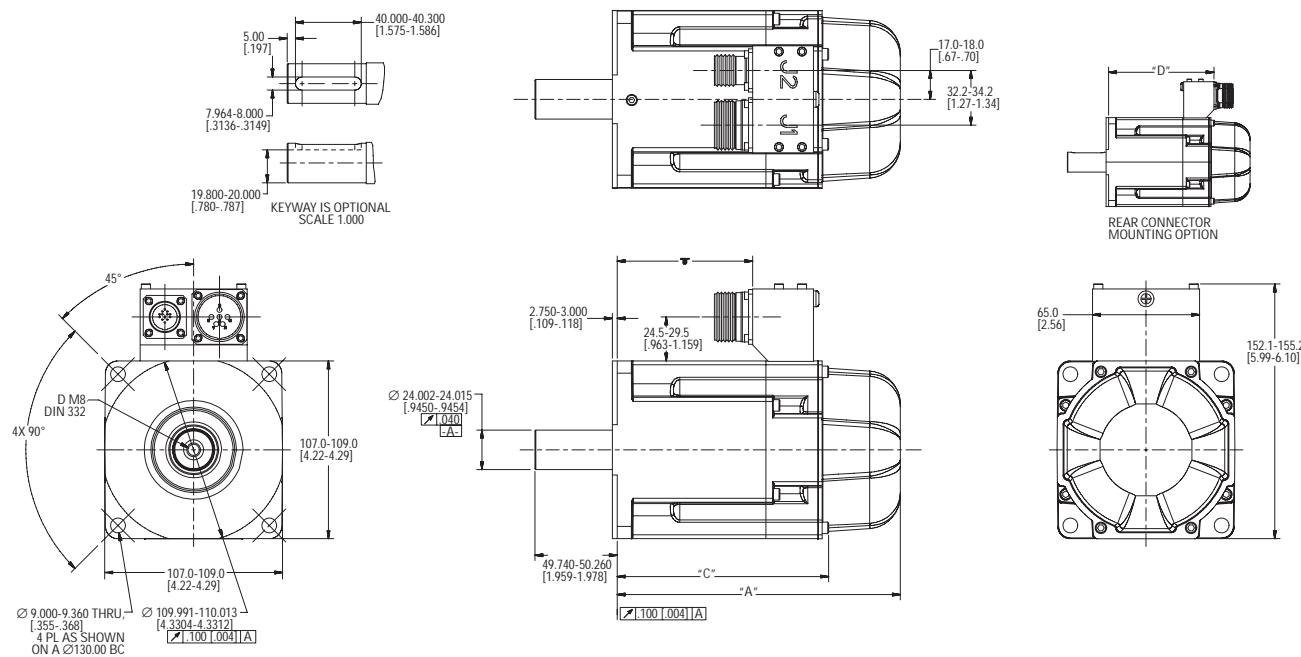

③ All data referenced to sinusoidal commutation.

④ Speed may be limited by Vbus.

⑤ Brake option reduces continuous torque by: EKM51 = 0.15 N·m EKM52 = 0.26 N·m EKM53 = 0.35 N·m EKM54 = 0.43 N·m

⑥ Motor weight does not include brake option.

Bearing Fatigue Life L_{10}

Bearing Fatigue Life L_{10} 

Shaft Fatigue Rating

Motor	Max. Radial Force (N)	Max. Axial Force (N)
EKM2	150	600
EKM3	340	600
EKM4	500	1400
EKM5	830	1740
EKM6	1940	2200
EKM7	2300	3000

The maximum radial load ratings reflect the following assumptions:

1. Motors are operated with peak torque of the longest member of the frame size.
2. Fully reversed load applied to the end of the smallest diameter standard mounting shaft extension.
3. Infinite life with 99% reliability.
4. Safety factor = 2.

Notes

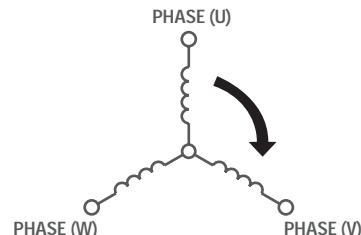

EKM Motor Resolver Feedback Details

Phasing Diagram - All Motors

General notes:

- When motor is rotated CW (viewed from drive shaft end), these waveforms result: Voltage U , leads V , leads W. Voltage U-W leads Voltage V-W by 60° electrical.
- PTC thermistor ($155^{\circ}\text{C} \pm 5^{\circ}\text{C}$ switching temperature) installed. Resistance at 25°C : ≤ 550 ohms. Switching Resistance: ≥ 1330 ohms within $\pm 5^{\circ}\text{C}$ of switch temperature.
- Standard outline drawings showing mounting dimensions and standard winding information are available on our Web site at www.danahermotion.com or by calling the Danaher Motion Assistance Center at 1-540-633-3400.

Null Voltage	mV _{rms}	50	30
Max. Error (pk-pk)	MINS.	16	20
Phase Shift	DEG	-9°	-3°
Operating Temperature	°C	-55° to 155°	-55° to 155°
Rotor Inertia Max.	kg cm ²	0.046	0.497

Resolver Winding Configuration

Resolver Alignment

With positive DC current into phase W and out of phase V (U floats) the resolver is aligned to electrical ± 5 counts. i.e. Voltage S1-S3 set to null voltage S2-S4 max in phase with reference (R1-R2).

Failsafe, Holding Brake

The holding brake is designed to provide static holding torque to the motor shaft with the brake coil de-energized. The brake must first be released (coil energized) prior to commanding motor rotation as determined by its drop-out time. The brake is intended for holding or "parking" of a stationary motor. Not intended for dynamic braking. There should be absolutely no motion of the rotor when power is removed from the brake coil.

EKM Motor Brake Options

Motor Family	Minimum Static Torque @120°C		Weight		Power Consumption @24V, 20°C	Current @24V, 20°C	Inertia		Closing Time (engage)	Opening Time (release)	Backlash ²	
	N-m	lb-in	Kg	lbs			ADC	kgcm ²	lb-in-sec ²		Maximum	Typical
EKM2	1.42	12.6	0.27	0.59	8.4	0.35	0.011	0.97E-05	18	20	1.01	0.46
EKM3	2.5	22.1	0.35	0.77	10.1	0.42	0.011	0.97E-05	10	25	1.01	0.46
EKM4	5.3	46.9	0.63	1.39	12.8	0.53	0.068	6.02E-05	15	35	0.81	0.37
EKM5	14.5	128	1.1	2.42	19.5	0.82	0.173	1.53E-05	15	80	0.71	0.31
EKM6	25	221	2	4.4	25.7	1.07	0.605	5.35E-05	20	105	0.51	0.24
EKM7	53	469	2.9	6.38	35.6	1.48	1.644	1.46E-05	35	110	0.44	0.20

1. Operating Voltage: 24 VDC +/- 10%.

2. Maximum backlash is calculated using worst-case tolerancing, and typical backlash is calculated using statistical tolerancing.

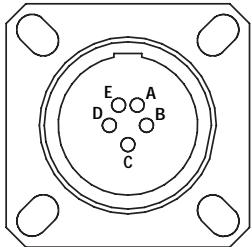

EKM Motor Connector & Feedback Pinouts

Connector Options

Power Connector

D38999/20FB5PN

EKM 2X, 3X, 4X

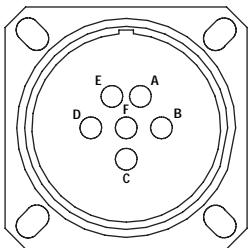

Pin	Function	Color
A	Motor A	Blue
B	Motor B	Brown
C	Motor C	Violet
D	Ground	Green/Yellow
E	Filler Pin	N/C

Power Connector

D38999/20FE6PN

EKM 5X, 6X, 7X

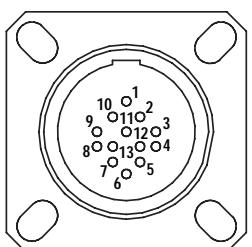

Pin	Function	Color
A	Motor A	Blue
B	Motor B	Brown
C	Motor C	Violet
D	Ground	Green/Yellow
E	Filler Pin	N/C
F	Filler Pin	N/C

Signal Connector

D38999/20FB35PN

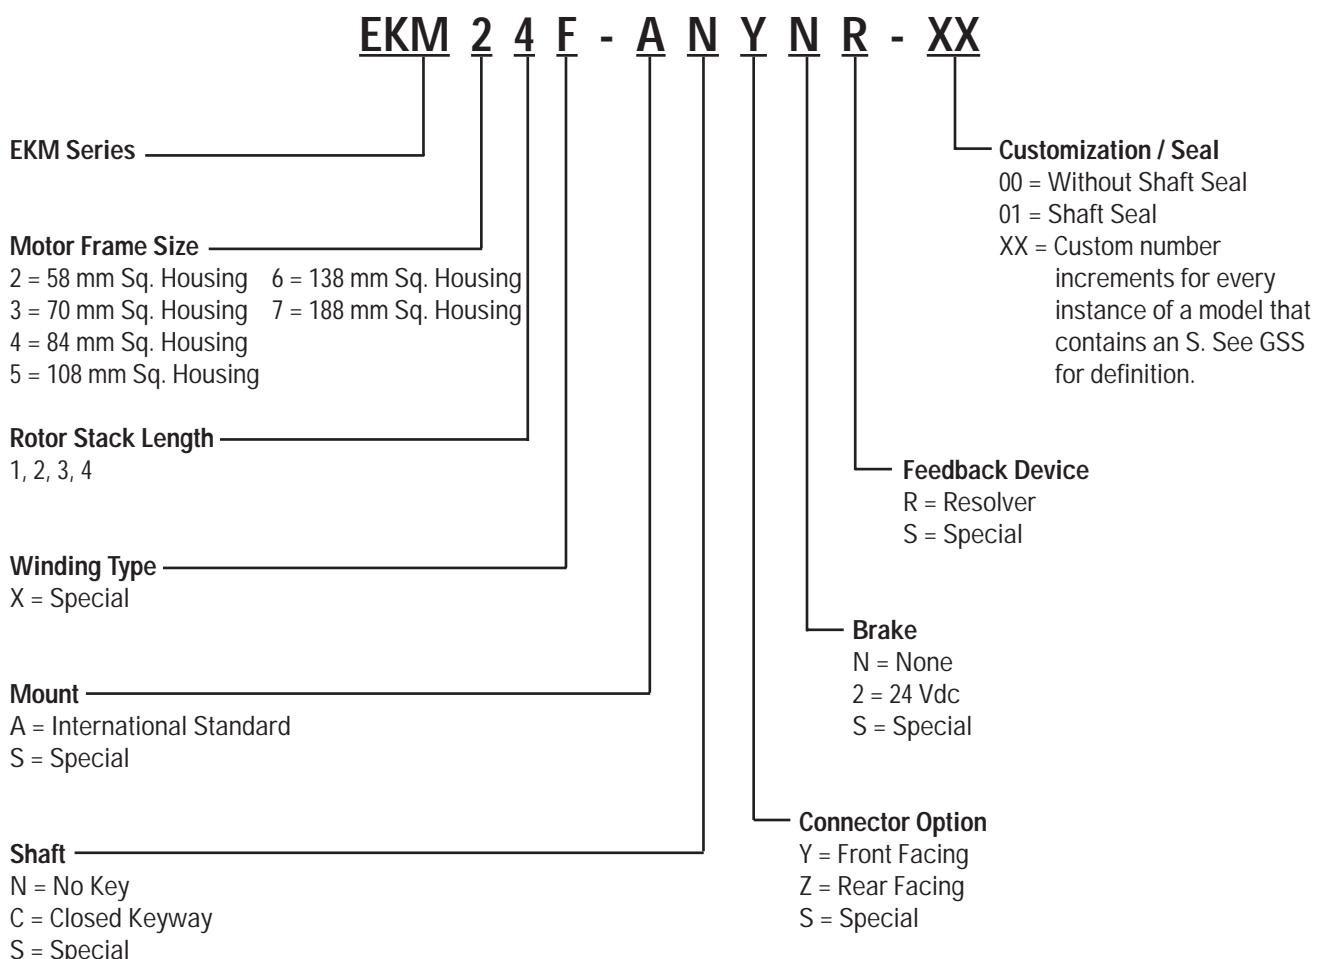

EKM 2X, 3X, 4X, 5X, 6X, 7X

Pin	Function	Color
1	Filler Pin	N/C
2	Thermistor	Blue
3	S4: COS (-)	Blue
4	S3: SIN (-)	Black
5	R2: REF (-)	Black/White
6	Thermistor	Black
7	S2: COS (+)	Yellow
8	S1: SIN (+)	Red
9	R1: REF (+)	Red/White
10	Filler Pin	N/C
11	Brake (+)	Black
12	Brake (-)	Black
13	Filler Pin	N/C

EKM Part Numbering System
