

# Kollmorgen Motion for Mammography

Whether fixed or mobile, whether 2D or 3D, whether targeted to major providers or remote clinics—a successful mammography machine must meet specialized requirements.

That's why it makes sense to trust motion systems to a partner who understands your industry. Who can help co-engineer perfect-fit solutions for better procedures. Who can help you achieve the required certifications. And who will deliver reliable supply and support anytime, anywhere in the world.

## APPLICATION-SPECIFIC EXPERTISE

Kollmorgen has 100 years of motion leadership, including over 40 years serving the medical device industry. We understand how important it is to design systems from the ground up to meet the needs of specific medical markets.

Co-engineering is our specialty. Our motor and drive engineers have decades of experience optimizing medical motion. Through our collaborative engineering process, we can help you minimize machine size and weight, reduce assembly and maintenance time, and achieve lasting reliability. And with our knowledge of international and regional standards, we can help you meet certification requirements to bring your machine to any market faster.

## SUPERIOR MOTION

Our servo drives provide superior positioning accuracy, with unique software filters that virtually eliminate unwanted motion. Our vast selection of standard servo motors and modifications can meet any design requirement. Our single-cable solution carries both power and data for simpler design, build and maintenance.

With these innovations and more, your machine can be more compact and reliable. The receptor and compression paddle can adapt to each patient at the optimum angle, with minimal noise or discomfort. And the X-ray tube can move efficiently to minimize scan time and the risk of patient motion.

## RELIABLE SUPPLY AND SUPPORT

With Kollmorgen's global footprint, you always have access to dependable supply, co-engineering expertise and personalized support. Where other motion suppliers commit only to maintaining their most profitable product lines, we maintain a deeper commitment to your long-term success.

We have a proven track record of supporting healthcare devices throughout their lifecycle. When you specify Kollmorgen motion solutions, you gain confidence that you'll still be able to manufacture and service your machine years from now with minimal need for retesting or recertification.
