4 Installing KAS IDE

4.1 System Requirements

KAS IDE minimum system requirements:

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating System</td>
<td>Microsoft® Windows® 7 SP1 (32 or 64-bit), Microsoft® Windows® 10 (32 or 64-bit). For optimal performance, please be sure your operating system is fully updated with the latest patches.</td>
</tr>
<tr>
<td>Processor type</td>
<td>Intel® Pentium® M or equivalent processor at 1.5 GHz or greater.</td>
</tr>
<tr>
<td>Memory</td>
<td>1 GB RAM (for 32-bit) or 2 GB RAM (for 64-bit) or greater (which is recommended for complex applications)</td>
</tr>
<tr>
<td>Storage</td>
<td>16 GB (for 32-bit) or 20 GB (for 64-bit) of free space on hard disk</td>
</tr>
<tr>
<td>Display</td>
<td>WXGA+ (1440 x 900) or higher-resolution monitor with 24-bit color. See Note #1 below.</td>
</tr>
<tr>
<td>Connectivity</td>
<td>1 Ethernet port, at either 100Mbits/s or 1Gbits/s. See Note #2 below.</td>
</tr>
<tr>
<td>Web Browser</td>
<td>A modern web browser is required to access the web server and online help. We recommend Internet Explorer (IE9 or later, see Note #3), Mozilla FireFox , or Google Chrome 🌐.</td>
</tr>
</tbody>
</table>

**NOTE**

1. Better results are achieved with OpenGL and 3D cards.
2. A 100Mb network is required in order to allow the IDE to Runtime communication to work in all conditions. The AKDWorkBench AutoTuner and Scope both require 100Mb of bandwidth to function properly.
3. IE9 should be considered a minimum. Later versions of the browser are more compliant with web standards and afford better performance and compatibility.

**TIP**

See the topic Connect Remotely for information about the ports used by the KAS IDE which may need to be opened to support connecting from an external network.

4.2 Download

The latest version of the Kollmorgen Automation Suite is available from KDN. Visit www.kollmorgen.com/en-us/developer-network/ to download the latest, or older versions.

**NOTE**

This is a restricted community to which you must be given access based on having purchased KAS. If you do not have access, please contact support.
4.3 Installation Procedure

How to proceed if you have a CD/DVD

After inserting the installation CD or DVD, a web browser automatically displays the installation start page.

\[ TIP \]
If the installation start page does not automatically display, double-click on the file `Index.html` file.

To start the installation of Kollmorgen Automation Suite, click the corresponding link and confirm that you want to execute `KAS-Setup.exe`.

Follow the procedure below to proceed with the KAS IDE software installation.

**IMPORTANT**
Installation of the KAS IDE can require you to change your firewall setting. If you do not have sufficient privileges to configure your firewall, you must stop the relevant Windows Service.

Once KAS has finished downloading, complete the following installation steps:

1. Double-click the `KAS-Setup.exe` file to run the installation Wizard.

\[ NOTE \]
A Security Warning dialog displays as a result of security certification. Do not be alarmed.

2. Click **Run** to start the installation Wizard.

3. While the setup is loading, wait for the setup splash screen to vanish after being displayed.

4. The following Welcome Wizard displays with the version and build number of the KAS IDE. Click **Next** to continue.

5. Review the License Agreement and click "I Agree" to continue the installation.

\[ NOTE \]
You must accept the agreement to install Kollmorgen Automation Suite.

6. Select the **Development Environment** installation type from the drop-down menu.

<table>
<thead>
<tr>
<th>Installation type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development Environment</td>
<td>This kind of installation is typically used for creating and developing a new application. When you need to install the KAS IDE and the KAS Runtime Simulator, you can select Development Environment as the type of installation.</td>
</tr>
<tr>
<td>Custom</td>
<td>You can manually select the specific KAS components to install.</td>
</tr>
</tbody>
</table>

7. Click **Next** to access the destination folder.

8. Click **Browse** to specify a custom install directory or accept the recommended default location. When finished, click **Install** to continue.

\[ TIP \]
Kollmorgen strongly recommends accepting the default destination folder under `C:\Program Files\Kollmorgen\Kollmorgen Automation Suite\Kollmorgen Automation Suite 3.02.X.X`.

9. The software installation begins. Wait until the installation process is complete.

10. You are done; click **Finish**.

\[ TIP \]
- Adding the **KAS IDE** application as an exception in your firewall settings is recommended to avoid security issues.
4.3.1 User Data
User-generated data such as log files, project sources, field bus configurations, function blocks, etc. are stored in the Windows User directory and are maintained between installations. This applies to files on AKD PDMMs, PCMMs, as well as Simulator files.

5 Installing KAS Runtime

The controller comes with all the necessary software already installed (including KAS Runtime).

**NOTE**

KAS Runtime is only supported with Kollmorgen controllers.

5.1 Updating the Runtime on PDMM & PCMM

The KAS Runtime is contained in the AKD PDMM and PCMM firmware, and comes pre-installed. Following is the procedure for updating the firmware and runtime using the KAS web server.

The firmware files are IMG files with the following name format:

- \texttt{KAS-PCMM-M-\{model-code\}-\{software-revision\}.img}
- \texttt{KAS-PDMM-M-\{model-code\}-\{software-revision\}.img}

The \texttt{model-code} reflects the CPU speed.

<table>
<thead>
<tr>
<th>Model</th>

</tr>
</thead>
<tbody>
<tr>
<td>MCEC</td>
<td>800 MHz</td>

</tr>
<tr>
<td>M1EC</td>
<td>1.2 GHz</td>
<td>single</td>
</tr>
<tr>
<td>M2EC</td>
<td>1.2 GHz</td>
<td>dual</td>
</tr>
</tbody>
</table>

1. Download the latest drive firmware and/or runtime firmware from \texttt{Kollmorgen.com}.
2. Open the controller's web server in your web browser by entering its IP address.
3. Select the \texttt{Settings} tabbed-page.
4. In the \texttt{Firmware} pane, click the \textbf{Choose File} button to select the new firmware image file for the KAS Runtime.

The recommended file is displayed in the \textbf{Current Information} section, as seen below.

![Firmware Information](image)

5. Click \textbf{Upgrade} to start the update procedure.

\textbf{TIP}

If the Upgrade button is disabled, log into the webserver. Click on \textbf{Login} at the top of the web page and enter the password.

A message and a throbber are shown across the web page, indicating that maintenance is in progress. The device's 7-segment display will animate chasing lights.

**Successful upgrade**

A message similar to the following is shown upon a successful firmware upgrade:

\texttt{Upload of firmware KAS-PDMM-M-MCEC-2.10.0.54368.img successful.}

Please reboot the unit in order to boot on the new firmware, and once reboot is performed, press CTRL+F5 in your web browser to force a page refresh.
An error message similar to the following will be displayed if the wrong firmware file was downloaded:

- The file provided is not compatible with this device.
- The file name should be...

"KAS-PDMM-M-MCEC-{version}.img"

6. After the download is complete, click **Reboot**.

A message and a throbber are shown over the web server while the reboot is in progress. The login session will no longer be valid when the reboot is complete. The web server will display a message to indicate the user has been logged out.

**NOTE**

This step is not necessary if the controller automatically reboots during the upgrade (previous step).

7. Press **CTRL+F5** to force the web browser to refresh the page.

**IMPORTANT**

Do not try to refresh the web page until firmware upgrade is done.
6 Installing Hardware

Before your motion application can be up and running, you first need to connect, wire and configure all your hardware components.

The Getting Started guide contains procedures for installing and configuring hardware components (HMI, controllers, I/O Terminals, EtherCAT Motion Bus, AKD Drive, and AKM Motor).

**IMPORTANT**

24-volt power is not passed through AKT-AN-200-000 and AKT-AN-400-000 thermocouple modules. To get 24VDC power to devices that need it (such as an AKT_AT-410-000 Output module) there are two possible solutions:

- Place the module requiring 24VDC before the thermocouple module.
- Add a power feed module (AKT-PS-024-000 or AKT-PSF-024-000) after the thermocouple module.
6.4.1 Installing Bus Terminals on mounting rails

**CAUTION**

Bring the bus terminal system into a safe, powered down state before starting installation, disassembly or wiring of the Bus Terminals!

### 6.4.1.1 Assembly

The Bus Coupler and Bus Terminals are attached to commercially available 35 mm mounting rails (DIN rails according to EN 50022) by applying slight pressure:

1. First attach the Fieldbus Coupler to the mounting rail.
2. The Bus Terminals are now attached on the right-hand side of the Fieldbus Coupler. Join the components with tongue and groove and push the terminals against the mounting rail, until the lock clicks onto the mounting rail.
   - If the Terminals are clipped onto the mounting rail first and then pushed together without tongue and groove, the connection is not operational! When correctly assembled, no significant gap is visible between the housings.

During the installation of the Bus Terminals, the locking mechanism of the terminals must not come into conflict with the fixing bolts of the mounting rail.

### 6.4.1.2 Disassembly

Each terminal is secured by a lock on the mounting rail, which must be released for disassembly:

1. Carefully pull the orange-colored lug approximately 1 cm out of the disassembled terminal, until it protrudes loosely. The lock with the mounting rail is now released for this terminal, and the terminal can be pulled from the mounting rail without excessive force.
2. Grasp the released terminal with thumb and index finger simultaneous at the upper and lower grooved housing surfaces and pull the terminal away from the mounting rail.

### 6.4.1.3 Connections within a bus terminal block

The electric connections between the Bus Coupler and the Bus Terminals are automatically realized by joining the components:

- The six spring contacts of the Standard/Performance Coupler deal with the transfer of the data and the supply of the Bus Terminal electronics.
- The power contacts deal with the supply for the field electronics and thus represent a supply rail within the bus terminal block. The power contacts are supplied via terminals on the Bus Coupler.

**NOTE**

During the design of a bus terminal block, the pin assignment of the inidual Bus Terminals must be taken account of, since some types (e.g. analog Bus Terminals or digital 4-channel Bus Terminals) do not or not fully loop through the power contacts. Power Feed Terminals (AKT-PS-024-000 or AKT-PSF-024-000) interrupt the power contacts and thus represent the start of a new supply rail.

### 6.4.1.4 PE power contact

The power contact labeled PE can be used as a protective earth. For safety reasons this contact mates first when plugging together, and can ground short-circuit currents of up to 125 A.

**WARNING**

Note that, for reasons of electromagnetic compatibility, the PE contacts are capacitatively coupled to the
mounting rail. It can lead to incorrect results during insulation testing or to damage on the terminal (e.g., disruptive discharge to the PE line during insulation testing of a consumer with a nominal voltage of 230 V).

For insulation testing, disconnect the PE supply line at the Bus Coupler or the Power Feed Terminal! In order to decouple further feed points for testing, these Power Feed Terminals can be released and pulled at least 10 mm from the group of terminals.

The PE power contact must not be used for other potentials!

6.4.1.5 Wiring

Up to eight connections enable the connection of solid or finely stranded cables to the Bus Terminals. The terminals are implemented in spring force technology. Connect the cables as follows:

1. Open a spring-loaded terminal by slightly pushing with a screwdriver or a rod into the square opening above the terminal.
2. The wire can now be inserted into the round terminal opening without any force.
3. The terminal closes automatically when the pressure is released, holding the wire securely and permanently.

**NOTE**

Analog sensors and actors must always be connected with shielded, twisted paired wires.

6.6 Installing Motors

To install AKM or AKM2G Servomotors, refer to the AKM Instructions Manual, available on KDN.
7 Updating Firmware

Check the KAS software release notes to find the AKD PDMM firmware version that matches with your KAS software version. The latest version of the firmware can be downloaded from the Kollmorgen website.

To ensure your installation is correct, you have to:

- Check the current AKD or AKD2G drive firmware
- Download the official version, if necessary
- Update the firmware

Check AKD / AKD2G Drive Firmware

To check AKD PDMM Firmware with KAS IDE:

1. Create a new project
2. Set the controller type and IP address
3. In the Project Explorer, double-click the EtherCAT node to open the EtherCAT Devices summary window
4. In the Devices tab, click the Scan Devices button
5. Choose the Create... option to map the physical device to a new device

**NOTE**
If the firmware version is shown as "Unknown", the drive has valid resident firmware (from which to boot), but does not have valid operational firmware. Please download and install the latest operational firmware and reboot the AKD/AKD2G.

6. If the version is not correct, continue following with the procedure below
7. Compile the project
8. Connect to the controller
9. Download the project to the controller
10. If the version is not correct, download the new firmware (click here) and follow with the next procedure.

</tbody>
</table>

To upgrade AKD PDMM drive Firmware with KAS IDE, continue from the previous procedure as follows:
1. In the toolbar, deactivate the Online Configuration Mode

2. Select the drives requiring the same firmware version to be updated (Note that the FW download is limited to 16 drives at a time)

![TIP]

Please note that the firmware download is limited to 16 drives at a time.

3. Click Upgrade Firmware button

![IMPORTANT]

Give careful attention to any warning dialog that appears at this point. These warnings usually include important information about preventing damage to the drives.

4. Browse to select the new AKD/AKD2G firmware file

5. Click Open to start the updating procedure

### 7.1 AKD/AKD2G Firmware Update

Based on the File Access over EtherCAT (FoE) protocol, the AKD/AKD2G drive Firmware can be downloaded as follows:

1. Scan the devices and make sure all devices are created
2. Compile the project
3. Connect to the controller
4. Download the project to the controller
5. Open the EtherCAT Devices summary form
6. Select the drives requiring the same firmware version to be updated
   - Multiple drives of the same type can be selected allowing the same firmware file to be downloaded to the selected drives simultaneously.
   - **AKD-P**: The last four letters of the model number must be the same for simultaneous firmware download.
   - **AKD-N**: The last four characters can be different. However, the firmware file selected to download must support all the selected models. The file `AKD-N-xxEC-********.i00` supports multiple AKD-N models.
   - **AKD-C**: Devices with the product description "AKD-C String 2" do not support firmware download.

7. Click the Upgrade Firmware button
Give careful attention to any warning dialog that appears at this point. These warnings usually include important information about preventing damage to the drives.

8. Browse to select the new AKD firmware file matching the AKD revision. Refer to the Release Notes for the latest supported firmware.
9. Click **Open** to start the updating procedure

**NOTE**
This procedure is not possible when applications are running and when the drive is in Online Configuration Mode.

During the firmware download, the AKD/AKD2G Firmware Update window displays a progress bar and the following messages are displayed:

- Uploading firmware to the drive
  During the download process, the drive LED displays [dL]. Additional codes may appear during the download; see 3.2 Display Codes for a description of codes related to the firmware download.
- Resetting the drive
- Firmware update is complete

**CAUTION**
While the firmware is downloading to your drive, do not remove the 24V logic power. If you remove the 24V logic power during a firmware download, a severe drive crash can occur. If a crash occurs, the drive will restart in a special mode and prompt you to reload the firmware.

**IMPORTANT**
An AKD drive executing the resident firmware is detected as a different device than an AKD or AKD2G drive executing the operational firmware. Be sure to re-scan the network and compile it if a drive’s executed firmware has changed since the last scan.

**TIP**
Power cycling is recommended after completing the update for all drives.
8 Installing Kollmorgen Visualization Builder

Kollmorgen Visualization Builder (or KVB) allows you to design HMI running on AKI panels. KVB is an optional feature that is only included in some licenses.

9 Finalizing Installation

To complete the KAS installation, you can optionally:

- Test the system
- Create a backup image

9.1 Testing Installation

To conclude your installation, the whole system has to be tested.

A test could be done with the standard Two-Axis Template that corresponds to a simple application (refer to KAS 30 Minutes to Motion).
10 Troubleshooting KAS

Faults occur for a variety of reasons, depending on the conditions in your installation. The causes of faults in multi-axis systems can be especially complex.
