Motion Solutions CD V4.0

The new release of Motion Solutions V4.0 contains four easy to navigate modules for System Sizing, Product Catalogs, Reference Information and online access to the Danaher Motion Assistance and Resource Center. Take advantage of nearly 1700 drive and motor combinations to size you servo application or simply get the latest product manuals all from a single source.

************ <u>**IMPORTANT RELEASE NOTES**</u> ************

Please read before installing and using Motion Solutions V4.0

Installing Motion Solutions V4.0

- All previous Motion Solutions versions must be uninstalled prior to installing Motion Solutions V4.0. Please use the Motion Solutions Uninstall Utility and follow the instructions to remove previous versions.

Converting previous Motion Solutions Sizing Projects to V4.0

- Project files created with older versions of Motion Solutions have the .msz extension and are not visible in V4.0 (in the *Open Existing Projects* dialog box) and need to be converted to a .mpj compatible format to be used with V4.0. To convert the older .msz file to the new .mpj file format you must first double click on the file in Windows Explorer. A pop up window will appear and click yes, which will then launch Motion Solution V4.0, and automatically convert the file to the new format. Each project file will need to be converted this way.

Program Updates for Motion Solutions.

- Refer to the following website for updates to Motion Solutions when available:
